Export and Import all MySQL databases at one time

Article Number: 112 | Rating: Unrated | Last Updated: Fri, Mar 18, 2022 at 10:08 PM

Export:

```
mysqldump -u root -p --all-databases > alldb.sql
```

Look up the documentation for mysqldump. You may want to use some of the options mentioned in comments:

```
mysqldump -u root -p --opt --all-databases > alldb.sql
mysqldump -u root -p --all-databases --skip-lock-tables > alldb.sql
```

Import:

```
mysql -u root -p < alldb.sql
