Wordpress random 500 internal server error

Article Number: 109 | Rating: Unrated | Last Updated: Tue, Mar 1, 2022 at 12:07 AM

Can you enable WP_DEBUG, to see if you can catch something there, as sometimes it is more useful than the server logs.

To do this, open

```
wp-config.php
```

located in the directory where WordPress is installed and then locate the line with the code

```
define('WP_DEBUG', false);
```

and change it to

```
define('WP_DEBUG', true);
define('WP_DEBUG_LOG', true);
define('WP_DEBUG_DISPLAY', false);
```
