see connections on a specific port using netstat in terminal

Article Number: 128 | Rating: Unrated | Last Updated: Sat, May 31, 2025 at 2:53 PM

To see connections on a specific port using netstat in Linux:

```
netstat -anp | grep :<port_number>
```

To see connections on a specific port using netstat in Windows:

```
netstat -np TCP | find "<port_number>"
```
