The ’Access-Control-Allow-Origin’ header with Giant Apache!

Article Number: 56 | Rating: Unrated | Last Updated: Mon, Oct 19, 2020 at 3:03 PM

```
SetEnvIf Origin ^(https?://(?:.+\.)?aonesalons\.com(?::\d{1,5})?)$   CORS_ALLOW_ORIGIN=$1
Header append Access-Control-Allow-Origin  %{CORS_ALLOW_ORIGIN}e   env=CORS_ALLOW_ORIGIN
```

```
The 'Access-Control-Allow-Origin' header contains multiple values '*, https://demo.aonesalons.com', but only one is allowed
