How to show content (files) in directory in browser?

Article Number: 65 | Rating: Unrated | Last Updated: Fri, Feb 5, 2021 at 12:53 PM

To enable directory listings for a folder on your web site:

- If a directory doesn't contain an index file (index.html, index.htm, index.php, etc) then you get an error message

- If you want them to see all the files in a directory, create an .htaccess file in the directory, containing this one line:

Options +Indexes

- Then remove any index files and the directory will display all files

More options:

```
Options +Indexes
IndexOptions FancyIndexing FoldersFirst NameWidth=* DescriptionWidth=*
```

```
Options +Indexes
IndexOptions FancyIndexing FoldersFirst NameWidth=30 DescriptionWidth=30
```

```
Options +Indexes
IndexOptions FancyIndexing FoldersFirst SuppressIcon
```
