

Open in ConEmu right click menu windows 7

Article Number: 71 | Rating: Unrated | Last Updated: Sat, Jul 19, 2025 at 1:35 PM

Configure it like this:

Settings → *Integration* (or *Settings* → *Features* → *Integration* in older versions)

Set up the *ConEmu Here* group (don't misuse *ConEmu Inside*) and press the *Register* button.

These options are stored in the registry (Explorer related keys) and that's why these settings are not stored the ConEmu configuration, so the *Save settings* button is useless on that particular page.
